-----------------	-----------------	-----------------	----------------

Defect Details

Our vessel at anchor in Bonnytown anchorage area was hit by an underway using engines outbound tug and barge named OSHE 3 at 2012 hrs LT/13.05.2022.

Point of impact by the barge was on our port bow area.

Inspection shows buckling/dent on the bow plating at 3 points. A rupture/crack can be sighted on the shell plating port bow inside the fore peak store between frame 169 to 171 and Buckling of bulwark between frame 172-173 on port bow.

Forepeak tank inspected no visible damage found.

Tug was contacted several times over VHF and sound/light signals sounded but no reply. After hitting the tug and barge ran away without stopping. Being in the congested anchorage of the river, our vessel had no time to carry out the emergency manouvers.

Other Details

Priority : Urgent	Assigned By : Vessel	Verified By :
Display in Daily Meeting? : No	SFI :	Verified On :

Causes

Poor manouvering of the towing barge by the tug resulting in hitting our vessel at anchor.

No compliance of safety of navigation by OSHE 3 bridge team.

Corrective Action

Buckling of the bow shell plate to be straightned

Preventive Action

Stringent action by the port authority on such careless tug masters as margin of error navigating in such congested river anchorage is very less.
