Defect Details

No1 DG Box Cooler Ps is leaking fresh water. In the last few days leakages have become significant. Today I have isolated the Box Cooler in order to eliminate the fresh water loss, so currently we are running with 3 box coolers. Problem is that for DDC and Kourou we are already facing challenges in order to keep the LT temperature under limits due to all known problems with warming water and mud, so most probably I will need to have this box cooler operational as well. Gasket needs to be replaced. Item No6 gasket is available on board, for item no5 partition gasket I have issued MORB-SOT-V230140. Please keep in mind that in order to lift the bundle sea water has to be below the mounting ring. I'm not sure if this can be achieved in ballast condition by trimming the vessel. Please see attached pictures.
